

Heuristic Evaluation Report

Evaluator: Kevin Patel

Date: 12th February 2024

Product Overview

- Product Name: Cats Adopt
- Product Goal: Cat adoption website
- User Group: People who are looking to adopt the cat

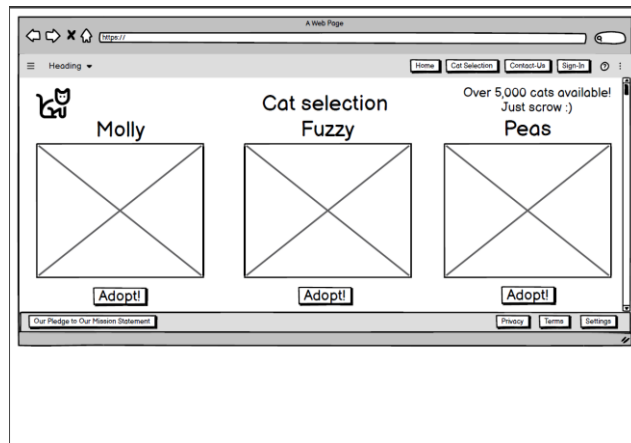

Positive Findings

- <Visibility of system status>
 - <All pages are clearly labeled and indicate which page you are on with titles and visual markers on the header.>
 - None of the pages are clearly labeled. However by looking at the design I can easily identify what each page is about. You also did not add any note to each page.
- Heuristic 2
 - Nielsen's Heuristics emphasize consistency and standards, which are evident in the website's design. The navigation bar remains fixed at the top of the site, facilitating easy access to different sections. Similarly, the Cat logo is consistently positioned at the top left corner of the page.
- Heuristic 3
 - Nielsen's heuristic of aesthetic and minimal design is also apparent, as the website features a streamlined and uncluttered layout that doesn't inundate the user with excessive information. This simplicity enables users to achieve their goals effortlessly, without the need to search extensively for actions or information.

Key Issues Identified (1)

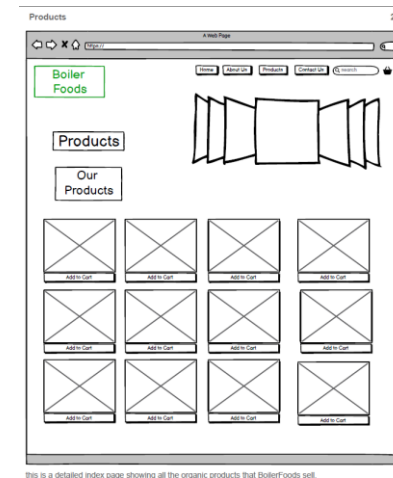

Issue

- Page: <Page 2 (Since pages are not labeled)>
- Heuristic: <Did not fulfil the requirement>
- Description: <The requirements mentioned to include 10 product images(10 items) but you have only mentioned 3 images>

Recommendation

- Just add more items instead of just listing 3 cats
- Here is an example: I pasted my product page showing 10 items

Key Issues Identified (2)

Issue

- Page: All pages
- Heuristic: Naming the pages
- Description: You failed to identify and describe the purpose of each page, despite this being a mandatory task.

Recommendation

- I would suggest to go and label each and every page and also include a note stating the purpose of each page

Key Issues Identified (3)

Issue

- Page: All pages
- Heuristic: Website domain name not provided
- Description: Did not name the website

Recommendation

- It would be advisable to assign a specific domain name to your website, such as catsadopt.com.

Evaluation for Home Page

Visibility of system status

- <describe how well the page shows system status>
- The home page appears to be in excellent condition and I believe no further modifications are necessary, aside from the previously mentioned concerns.

Evaluation for all pages

All pages <one heuristic per slide>

- Beyond the tasks of naming the pages, including a description, and assigning a domain name to the website, I don't observe any further flaws in the website's design; it seems to be executed impeccably.
